

Made with Firelands Scientific's Sungrown Cannabis
Just the Plant's Natural Compounds: No Chemical Solvents Used

A solventless vaporization solution.

Firelands Scientific's Concentrates are hand-crafted in small batches with time and care by our experienced extraction professionals. Using nothing other than pressure, a little bit of heat, and cold water, the green plant material is carefully separated from the resin glands of the plant, which contain all its natural oils.

Top-tier plants.

Each cannabis variety used for our solventless concentrate products has been hand-selected and vetted by our extraction team for high-quality traits and unique terpene profiles.

Full spectrum oil.

Solventless Concentrates are Full Spectrum products, meaning they reflect most of the cannabis plant's original phytochemical properties, including its naturally derived cannabinoids and terpenes.

Cultivar combinations.

Some Firelands Scientific concentrate products are created from a single, specific cultivar. Others include an array of THC Rich, Mixed Ratio and CBD Rich cultivars to offer unique experiences for those who may desire additional cannabinoids and terpenes in their treatment.

*Note: Per Ohio's Medical Marijuana Control Program (MMCP) regulations, cannabis concentrates may not exceed more than 590 milligrams of THC per whole day unit. Additionally, THC must make up no more than 70% of the cannabis product's total composition.

Offered in:

THC Rich

**Mixed Ratio
(THC / CBD)**

CBD Rich

Solventless Concentrate

Full Spectrum. Hand Crafted.
