

FIRELANDS
SCIENTIFIC

Made with Firelands Scientific's Sungrown Cannabis

No Artificial Flavors: Contains Simply Cannabinoids, Terpenes, MCT Oil and Alcohol

**More selection,
wholesome ingredients.**

Crafted consciously from sungrown cannabis without any artificial flavors, Firelands Scientific's Cannabis Tincture is offered in three cannabinoid formulations (each in three different flavors) to better serve patients' diverse medical needs and taste preferences.

**An alternative for those
who don't wish to inhale.**

At Firelands Scientific, we recognize that each patient is unique, and may need to consume cannabis using different methods. Our Cannabis Tincture is a simple-to-administer option for those who either are unable to vaporize, or simply don't enjoy vaporizing cannabis.

Broad spectrum.

The cannabis oil in Firelands Scientific's Cannabis Tinctures is created from our sungrown plants through a clean extraction process that retains much of the plant's

original properties. Oleoresin—which consists of essential oils, terpenoids, cannabinoids, and any other resin is extracted from plant matter using temperature and pressure. These naturally derived plant components are then carefully measured and brought back together in precise, unique formulations developed by our experienced extraction team to offer a consistent experience.

(For Full Spectrum selections—which retain an even more complete formulation of an individual cultivar's original makeup—check out Firelands Scientific's Solventless Concentrate and Flower product offerings.)

*Note: Per Ohio's Medical Marijuana Control Program (MMCP) regulations, cannabis concentrates may not exceed more than 590 milligrams of THC per whole day unit. Additionally, THC must make up no more than 70% of the cannabis product's total composition.

Offered in:

THC Rich

**Mixed Ratio
(THC / CBD)**

CBD Rich

Flavors:

Unflavored

 Mint

 Citrus

Cannabis Tincture

Broad Spectrum. Fast Acting.
