

# Firelands Scientific's **NEW** Cannabis Oil All-in-One Rechargeable Vape Pen

## This New Disposable Vape Pen Is A Sleek And Convenient Vaporization Device Made With:

- A durable, borosilicate glass oil tank
- Breath-activated buttonless battery
- Micro-USB charging port  
(micro-USB charger included)

## More Reasons to Choose Our Best-in-Class Vape Pen

- Built with a ceramic coil indirect heating element to preserve flavor.
- Absorbent, organic cotton—for no wasted oil.
- Battery overcharge protection.
- Lead-free design.

Combined with our Broad Spectrum cannabis oil—made only from cannabinoids and terpenes—the Firelands Scientific Cannabis Oil Vape Pen provides a flavorful and consistent experience to administer high-quality cannabis medicine.

## How to Use:

1. Remove Cannabis Oil Vape Pen from package.
2. Remove silicon tip from mouthpiece.
3. Simply inhale through the mouthpiece. No buttons, no fuss.
4. When battery is low, charge the device using the accompanying micro-USB adapter.

## Tips for Use and Storage

- Start low and go slow. The shorter and softer the inhale, the smaller the dose.
- Store device upright in a cool, dry place. Avoid moisture, direct sunlight, and prolonged periods of extreme hot or freezing temperatures (i.e. leaving in a vehicle overnight during wintertime). Higher altitudes and air pressures may cause leakage and affect overall performance.
- When finished, dispose of device. We strongly encourage checking with your local government agency to locate nearest battery recycling drop-off for greener disposal.
- You may also save your device for future use. The mouthpiece is removable for convenient refilling with cannabis oil purchased via the Ohio Medical Marijuana Control Program, such as the Firelands Scientific Cannabis Oil Syringe.
- If the device presents a clogging issue, inhale from the device slowly and lightly a few times. This will cause the oil to slowly heat up and release, without getting too hot and impacting taste.

## Tips for Cleaning

- Remove mouthpiece tip from device.
- Gently wipe clean mouthpiece using isopropyl alcohol to remove any oil residue. Ensure it is dried completely before re-attaching.
- Using a dry cotton swab, gently wipe the inside of the cartridge chamber clean until no oil residue is left. **Do not** use any type of alcohol or water to clean the cartridge, as this will damage the device.

Note: Per Ohio's Medical Marijuana Control Program (MMCP) regulations, cannabis concentrates may not exceed more than 590 milligrams of THC per whole day unit (WDU). Additionally, THC must make up no more than 70% of the cannabis product's total composition.

Per MMCP regulations, a battery must be sold with every vape pen device.
