

# Firelands Scientific is proud to introduce Ohio's first Solventless Hash Oil Vape Cartridge without the need to purchase a battery with every cartridge!

Solventless Hash Oil, also known as SHO, refers to concentrated cannabis oil that has been:

- Extracted without the use of solvents such as butane, propane, or CO2 (carbon dioxide).
- The Solventless process results in a cleaner, high-quality concentrate that accurately represents that terpene and cannabinoid profile of the strain used for extraction.
- Made in smaller batches
- Contain the full terpene and cannabinoid profile unique to the cultivar

Our SHO is a Live concentrate; "Live" concentrates are made from fresh frozen plant material—meaning the flower is not dried and/or cured before its terpene and cannabinoid content are extracted.

We utilize AVD's top-of-the-line cartridge brand to fill with our full-spectrum, Solventless Hash Oil (SHO). AVD's cartridges employ various top-end design qualities, including a removeable mouthpiece for easy refills, a borosilicate well design for durability and flavor maintenance, absorbent cotton to ensure there is no wasted oil and a fully-cased ceramic coil designed to prevent burning, overheating, and overall maintaining a consistent experience.

- Sleek & convenient Magnetic Cartridge approved for use with Firelands Scientific's NEST Battery
- Temperature control "Low" setting provides optimal experience with our specific oil viscosity
- Non-toxic, inert and lead-free composition
- Fully encased heating element to preserve and protect the original flavor
- Balanced ratio of oil to air ensuring perfect vapor flow
- Porous ceramic design maximizes vaporization while preventing residue buildup

\*Note: the device shall not be modified by the purchaser or used with batteries not specifically intended for that device rendering it unable to meter the doses; and modifying or using this device in a manner not designed or intended may result in grounds for discipline. \*
